Denny 2009 UK [228]	<p>Aim of study Explore women's experience of living with endometriosis. One-year follow-up from Denny 2004 [227].</p> <p>Underpinning theory Feminist approach</p>	<p>Setting See Denny 2008</p> <p>Participants Interviews: 27 women; see Denny 2008</p> <p>Diary: 19 other women</p>	<p>Sampling Method Purposeful (interviews)</p> <p>Not reported (diaries)</p>	<p>Data collection Methods Interview: see Denny 2008</p> <p>Diary on endometriosis for one menstrual cycle; completed by 7 women</p> <p>Interviewer See Denny 2008</p>	<p>Analysis Methods Narrative analysis</p> <p>Analysts Only one author, social scientist</p>	<p>Measures to support trustworthiness See Denny 2008, [226], regarding respondent validation.</p>
Facchin 2017 Italy [229]	<p>Aim of study Provide a broader understanding on how endometriosis affects psychological health</p> <p>Underpinning theory Grounded theory</p>	<p>Setting Tertiary level referral center for treatment of endometriosis</p> <p>Participants 74 women Age: 24 to 50 years</p>	<p>Sampling Method Theoretical sampling Consecutively recruited</p> <p>Inclusion criteria Self-referred for treatment, surgically verified diagnosis, different forms of endometriosis</p>	<p>Data collection Methods Face-to face interviews with a story-telling approach, conducted at the hospital Time: average 45 minutes</p> <p>Interviewer Trained psychologists including the first author</p>	<p>Analysis Methods Constant comparative (Corbin & Strauss 2008)</p> <p>Analysts Three, working independently</p>	<p>Measures to support trustworthiness All emergent themes were continuously discussed in the research team</p> <p>Findings were presented to expert gynecologists and female members of a non-for-profit endometriosis association</p> <p>Discrepancies were discussed until consensus was reached</p>

First author Year Country Reference	Aim of study Underpinning theory	Setting Participants	Sampling	Data collection	Analysis	Measures to support trustworthiness
Gilmour 2008 Huntingdon 2005 New Zealand [230,231]	Aim of study Explore the perceptions of living with endometriosis Underpinning theory Feminist research principles	Setting Local endometriosis support group Participants 18 women Age: 16 to 45 years Diagnostic delay: 5–10 years	Sampling Method Interested women from the support group contacted the researchers after information about the project	Data collection Methods Unstructured, interactive interview Interviewer Not described, but familiar with endometriosis and knowledgeable how to handle emotional reactions during the interview	Analysis Methods Thematic analysis Analysts The authors, with a nursing background and working as researchers at a department for health and social services	Measures to support trustworthiness Continuous collaboration with the support group Emerging themes were presented at two meetings and verified by the participants
Grundstrom 2017 Sweden [232]	Aim of study Identify and describe the experiences of health care encounters for women with endometriosis Underpinning theory Phenomenology	Setting A university and a central hospital clinic Participants 9 women consecutively invited by three gynecologists in charge of their endometriosis treatment Age: 23–55 years (median 37 years)	Sampling Method Purposive sampling Inclusion criteria Age >18 years Laparoscopy-verified endometriosis	Data collection Methods Semi-structured interviews in the home or a separate room at the hospital library Length: 33–113 min (median 64 min) Interviewer Midwife and Doctoral student	Analysis Methods Moustaka's modification of the Stevick-Colaizzi-Keen method (adding interpretation) Analysts Three researchers (two with midwife background, one a PhD student and the other a researcher, the third with a nursing background and researcher)	Measures to support trustworthiness Reporting the audit trail (i.e., describing every step of the data collection and analysis.) The researchers analysed the data independently from each other, discussed the analysis and arrived at a consensus.
Jones 2004 UK [233]	Aim of study Explore and describe the impact of endometriosis on quality of life Underpinning theory	Setting Gynecology outpatient clinic Participants 24 women (until theoretical saturation)	Sampling Method Theoretical sampling to cover different disease stages and symptom profiles	Data collection Methods Semi-structured, in depth interviews at the hospital Mean time: 55 min	Analysis Methods Constant comparative method Analysts Not described	Measures to support trustworthiness The same themes were identified and the interviewees' dialogues were interpreted in the same way.

First author Year Country Reference	Aim of study Underpinning theory	Setting Participants	Sampling	Data collection	Analysis	Measures to support trustworthiness
	Grounded theory to generate categories and concepts	Age: 21.5 to 44 years; mean age 32.5 years	Inclusion criteria Laparoscopically verified endometriosis	Interviewer The researcher had no personal experience of endometriosis and only very basic knowledge of its symptoms before the interviews were started		
Young 2016 Australia [234]	Aim of study Explore experiences of health care related to endometriosis and fertility Underpinning theory Not described	Setting Non-clinical Participants 26 women, the majority in their 30s	Sampling Method invitation by advertisements. After 20 interviews, purposeful sampling was applied to ensure diversity Inclusion criteria At least 18 years Surgically verified endometriosis	Data collection Methods In depth, semi-structured interviews, face-to face or over the phone Mean time: 63 minutes Interviewer First author	Analysis Methods Thematic analysis (Braun & Clarke) Analysts Initial analysis by the first author. Then all authors participated in the analysis and interpretation of data.	Measures to support trustworthiness
